4 Usage **11**

Introduction

GSet library is a C library to manipulate sets of data.

Elements of the GSet are void pointers toward any kind of data. These data must be allocated and freed separately. The GSet only provides a mean to manipulate sets of pointers toward these data.

It offers functions to add elements (at first position, last position, given position, or sorting based on a float value), to access elements (at first position, last position, given position), to get index of first/last element pointing to a given data, to remove elements (at first position, last position, given position, or first/last/all pointing toward a given data), to search for data in elements (first one or last one), to print the set on a stream.

1 Interface

```
// *************** GSET.H ***************
#ifndef GSET_H
#define GSET_H

// ================= Include ==================
#include <stdlib.h>
#include <stdio.h>

// ================= Define ==================

// ================= Data structures ===================

// Structure of one element of the GSet
struct GSetElem;
typedef struct GSetElem {
  // Pointer toward the data
  void* _data;
  // Pointer toward the next element in the GSet
  struct GSetElem *_next;
  // Pointer toward the previous element in the GSet
  struct GSetElem *_prev;
  // Value to sort element in the GSet, 0.0 by default
  double _sortVal;
} GSetElem;

// Structure of the GSet
typedef struct GSet {
  // Pointer toward the element at the head of the GSet
  GSetElem *_head;
  // Pointer toward the last element of the GSet
  GSetElem *_tail;
  // Number of element in the GSet
  int _nbElem;
} GSet;

// ================ Functions declaration ====================

// Function to create a new GSet,
// Return a pointer toward the new GSet, or null if it couldn't
// create the GSet
GSet* GSetCreate();

// Function to free the memory used by the GSet
void GSetFree(GSet **s);

// Function to empty the GSet
void GSetFlush(GSet *s);

// Function to print a GSet
// Use the function 'printData' to print the data pointed to by
// the elements, and print 'sep' between each element
// Do nothing if arguments are invalid
void GSetPrint(GSet *s, FILE* stream,
  void(*printData)(void *data, FILE *stream), char *sep);

// Function to insert an element pointing toward 'data' at the
// head of the GSet
// Do nothing if arguments are invalid
void GSetPush(GSet *s, void* data);

// Function to insert an element pointing toward 'data' at the
// position defined by 'v' sorting the set in decreasing order
```

```
// Do nothing if arguments are invalid
void GSetAddSort(GSet *s, void* data, double v);

// Function to insert an element pointing toward 'data' at the
// 'iElem'-th position
// If 'iElem' is greater than or equal to the number of element
// in the GSet, elements pointing toward null data are added
// Do nothing if arguments are invalid
void GSetInsert(GSet *s, void* data, int iElem);

// Function to insert an element pointing toward 'data' at the
// tail of the GSet
// Do nothing if arguments are invalid
void GSetAppend(GSet *s, void* data);

// Function to remove the element at the head of the GSet
// Return the data pointed to by the removed element, or null if the
// GSet is empty
// Return null if arguments are invalid
void* GSetPop(GSet *s);

// Function to remove the element at the tail of the GSet
// Return the data pointed to by the removed element, or null if the
// GSet is empty
// Return null if arguments are invalid
void* GSetDrop(GSet *s);

// Function to remove the element at the 'iElem'-th position of the GSet
// Return the data pointed to by the removed element
// Return null if arguments are invalid
void* GSetRemove(GSet *s, int iElem);

// Function to remove the first element of the GSet pointing to 'data'
// Do nothing if arguments are invalid
void GSetRemoveFirst(GSet *s, void *data);

// Function to remove the last element of the GSet pointing to 'data'
// Do nothing if arguments are invalid
void GSetRemoveLast(GSet *s, void *data);

// Function to remove all the selement of the GSet pointing to 'data'
// Do nothing if arguments are invalid
void GSetRemoveAll(GSet *s, void *data);

// Function to get the element at the 'iElem'-th position of the GSet
// without removing it
// Return the data pointed to by the element
// Return null if arguments are invalid
void* GSetGet(GSet *s, int iElem);

// Function to get the index of the first element of the GSet
// which point to 'data'
// Return -1 if arguments are invalid or 'data' is not in the GSet
int GSetGetIndexFirst(GSet *s, void *data);

// Function to get the index of the last element of the GSet
// which point to 'data'
// Return -1 if arguments are invalid or 'data' is not in the GSet
int GSetGetIndexLast(GSet *s, void *data);

#endif
```

2 Code

```
// *************** GSET.C ***************

// ================= Include ==================
#include "gset.h"

// ================ Functions implementation ==================

```

Output:

```
Created the set, nb elem : 0
Pushed [1,3,2], nb elem : 3
Print GSet:
2, 3, 1
Pop elements :
2, 3, 1,
Push back and drop elements :
1, 3, 2,
```

```
Append back and pop elements :
1, 3, 2,
Append back and drop elements :
2, 3, 1,
Add sort [2,3,1] and get elements :
3, 2, 1,
Insert 0 at 0, 2, 8 and get elements :
0, 3, 0, 2, 1, (null), (null), 0,
Remove at 7,1,0 and get elements :
0, 2, 1, (null), (null),
Index of first null data : 3
Index of last null data : 4
Delete all null and get elements :
0, 2, 1,
```
