Introduction

GSet library is a C library to manipulate sets of data.

Elements of the GSet are void pointers toward any kind of data. These data must be allocated and freed separately. The GSet only provides a mean to manipulate sets of pointers toward these data.

The GSet offers functions to add elements (at first position, last position, given position, or sorting based on a float value), to access elements (at first position, last position, given position), to get index of first/last element pointing to a given data, to remove elements (at first position, last position, given position, or first/last/all pointing toward a given data), to search for data in elements (first one or last one), to print the set on a stream, to split, merge, count elements and sort the set (using quicksort algorithm).

The library provides also GSetVecFloat, GSetVecShort, GSetBCurve, GSetSCurve structure with same interface as a GSet but whose contents is restrained to, respectively, VecFloat, VecShort, BCurve, SCurve, Shapoid, KnapSackPod, PBPhysParticle, GTree structures.

The library also provides two iterator structures to run through a GSet forward or backward, and apply a user defined function on each element.

It uses the PErr library.

1 Interface

```
// ***** GSET.H *****
#ifndef GSET_H
#define GSET_H

// ===== Include =====
#include <stdlib.h>
#include <stdio.h>
#include <stdbool.h>
#include <string.h>
#include "pberr.h"

// ===== Data structures =====

// Structure of one element of the GSet
struct GSetElem;
typedef struct GSetElem {
    // Pointer toward the data
    void* _data;
    // Pointer toward the next element in the GSet
    struct GSetElem* _next;
    // Pointer toward the previous element in the GSet
    struct GSetElem* _prev;
    // Value to sort element in the GSet, 0.0 by default
    // Sorting in increasing value of _sortVal
    float _sortVal;
} GSetElem;

// Structure of the GSet
typedef struct GSet {
    // Pointer toward the element at the head of the GSet
    GSetElem* _head;
    // Pointer toward the last element of the GSet
    GSetElem* _tail;
    // Number of element in the GSet
    int _nbElem;
} GSet;

// Structures of the GSet iterators
typedef struct GSetIterForward {
    // GSet attached to the iterator
    GSet* _set;
```

```

    // Current element
    GSetElem* _curElem;
} GSetIterForward;

typedef struct GSetIterBackward {
    // GSet attached to the iterator
    GSet* _set;
    // Current element
    GSetElem* _curElem;
} GSetIterBackward;

// ===== Functions declaration =====

// Function to create a new GSet,
// Return a pointer toward the new GSet
GSet* GSetCreate(void);

// Static constructors for GSet
#if BUILDMODE != 0
inline
#endif
GSet GSetCreateStatic(void);

// Function to clone a GSet,
// Return a pointer toward the new GSet
GSet* GSetClone(const GSet* const that);

// Function to free the memory used by the GSet
void _GSetFree(GSet** s);

// Function to empty the GSet
#if BUILDMODE != 0
inline
#endif
